02

WHO WE ARE

A Saudi technology company with a product-and-delivery model.

PHITEK — Arab Funds Information Technology Company — helps institutions transform digitally through consulting and delivery, while building and operating digital products that serve clear market needs.

We do not sell a generic technology catalogue. We advise, deliver, and operate where the fit is real.

POINT OF VIEW

Consulting expertise joined with product building.

One path: understand the need, deliver the technology, and bring operating products into the engagement when that is the right fit.

Advise and deliver

We design and deliver transformation, modernization, AI, and automation — from diagnosis to operations.

Build digital products

We develop complete digital products and run them in market with production discipline.

Connect them when it fits

When the need matches, we bring our products or operating experience into the institutional engagement.

04

PRODUCTS & SOLUTIONS

Digital products and technology services for clear market needs.

Each offering addresses a specific operating problem — from AI web building and commerce to enterprise systems services and career tooling.

AI WEB BUILDING

Build production websites and web apps by chatting with AI — from idea to deploy.

COMMERCE OPERATIONS

Run storefront, delivery, payments, and marketing in one system for day-to-day retail operations.

ENTERPRISE SYSTEMS

Modernize enterprise systems through integration and a controlled transition — without risky big-bang replacement.

CAREER COMPANION

Support career paths with resumes, job search, and daily tasks powered by intelligent assistance.

05

ENTERPRISE ARM

Selective services for institutions that need controlled delivery.

Beyond products, we offer focused modernization, integration, AI, and automation — not a catalogue of disconnected technologies.

Systems modernization

Update existing enterprise systems through a measured path, preserving continuity while reducing technical risk.

Integration & platforms

Connect systems and operating platforms so data and processes move with governance and clarity.

AI & automation

Apply intelligence and automation where they improve real workflows — designed for operation, not demos.

Delivery to operations

From diagnosis to handover: architecture, implementation, and operating ownership that institutions can sustain.

06

HOW WE WORK

From diagnosis to operations — four clear steps.

No inflated promises. A disciplined sequence that keeps risk visible and outcomes measurable.

01

Discover

Understand the operating reality, priorities, and constraints before recommending a path.

02

Architect

Define executable transition options with clear decisions, sequencing, and measures of success.

03

Deliver

Implement with governance, integration discipline, and controlled release into production.

04

Operate

Stabilize, clarify ownership, and improve continuously after go-live.

07

DIFFERENCE

Consulting expertise, delivery, and products in market.

We do not rely on unverified metrics or technology slogans. We rely on a clear way of working.

We advise before we build

We start by diagnosing the need and the required outcome, then choose the technical path that fits.

We deliver to operations

We ship integrations, automation, and system updates that can be measured — not reports detached from reality.

We operate what we build

Our products demonstrate the ability to build living software and support it after launch.

We stay selective

Engagements are chosen for fit. Clarity beats volume — for the client and for the work.

Ready to discuss your need?

Whether you are exploring a product, an enterprise engagement, or a partnership — we begin with a clear understanding, then define the path.
